List of existing features

Common features

Charts — This feature implements FusionCharts library on the Drupal Multisite platform.

Contact Form — This feature provides a way to contact site responsible(s) by using an online form.

E-Library — Allows contributors to publish documents represented as uploaded files in various possible formats (pdf, xls, doc...). Documents will be stored in a space named E-Library. Every user can have access to the documents in the E-Library.

EC Content Slider — A functionality similar to a Slideshow but allow to slide the Content (text, link, image) for various content-type.

Embedded Videos — Allows to embed videos from Youtube, dailymotion or vimeo.

EU Press Releases — Aggregator or similar functionality to be used for the integration of press releases from the Commission's press room into the Drupal website.

Events — This feature allows community members to define an event in the calendar. An event is used to store the information about something happening somewhere at a specific day or period of time. Event's visibility depends on the community he's created in (private or public).

Events (sp) — Allows contributors to define an event in the calendar. An event is used to store the information about something happening somewhere at a specific day or period of time. Every user can view the content of an event throuht the calendar.

Extend profiles — Gives a possibility for the administrator to manage information about user's profile on the site. He can add some additional fields and define whether the information must be filled by a new user or not, or if user can hide the information or not.

F.A.Q — Allows administrators to post answers to frequently asked questions. This content is available for every user on the site, directly from its homepage.

Fat footer — Provide a expanded main menu at the bottom of page.

Idea — Suggest ideas, vote on and discuss already submitted ideas, surface most important/best ideas.

LikeDislike — This feature enables to display the "Like/Dislike buttons". Please visit: http://webtools.ec.europa.eu/like/examples/ in a way to access documentation, about how to install the buttons.

Links (sp) — Allows contributors to store a bookmark/URL to another website they wish to share with users. Every user can have access to the links.

MaxLength (CounterDown) — Displays a dynamic countdown on textfields and textareas

MediaGallery (sp) — Contributors can add picture galleries.

Mega Menu

Multi-user Blog — Allows contributors to create their own blog.

Multilingual tools — Provide tools to enhance the translation tasks.

Multisite save-on-the-fly — This feature provides a way to "autosave" data in any Drupal Content-Type (forms) without submitting the form.

[Multisite translations](#) — Provide a system for translation requests management.

[News](#) — Allows contributors to publish news article he wishes to share with the other users. Every user can view the content of the news throught the news slider on homepage.

[Newsletter](#) — Gives a possibility to the administrator of the site to send regular emails to site users. Newsletters are based on contents of the site and will inform users about new contents or specific information the administrator would like to communicate.

[Node pager](#) — The node pager allows to add a pager to browse between nodes of the same content type based on a predefined field.

[Notifications](#) — This feature enables users to subscribe to be notified of new or updated nodes or of comments. Users can subscribe to individual nodes, all nodes of a particular content type or all nodes tagged with a particular taxonomy term.

Anonymous subscription

Provide a block which provide both anonymous and authenticated users with a form to subscribe to newly added content. User signs up to emails alerts. The anonymous users should be entitled as well to access the subscribe box. No roles necessary.

[Sitemap](#) — Helps users (mainly new users) to have a quick overview of how the site is organized and what the site proposes to users.

[Social Bookmark](#) — Let your visitor share your site content on social network.

[Splash screen](#) — Provide a home page to choose language and store language in cookie.

[Surveys](#) — Allows administrators to question site users. Every user concerned by the poll/survey can respond as many times as allowed by the survey initiator. Results are stored and some statistics are generated and can be browsed by users.

[Wiki](#) — A collaborative content that allows contributors to share information about a specific subject. Every contributor having access to the wiki can modify it and create a new revision. Every user, can view the content of the wiki.

Community only features

[Business indicators](#)

[Communities](#) — This feature provides a space to group contents about a common subject. A community can be private or public, which impacts on the visibility of content (wikis, forums, links, news, documents, ...).

[Forums](#) — This feature is a content type that can be created only inside a community, so it is not available in the standard configuration. It allows community administrator to organize discussions between members of the community. Organization is done using rooms in which members can define threads (discussions). Every user having access can then post comments and contribute to the discussion.

[Links](#) — This feature allows community members to store a path/URL to another site they wish to share with other users. The visibility of links can be restrained if created in the frame of a community.

[MediaGallery](#) — Contributors can add picture galleries.
